

RENJITH KUMAR NAIR

SOC Analyst | Security Operations & Incident Response
Grays, United Kingdom | renjithknair2203@gmail.com | linkedin.com/in/renjith-k-nair

PROFESSIONAL SUMMARY

First-class Computer Science graduate (Brunel University London) building a dedicated, self-directed foundation in security operations and incident response. Through Let's Defend's SOC Analyst Learning Path, I have conducted simulated investigations into phishing, malware and brute-force activity, analysing logs, identifying Indicators of Compromise, and following structured triage, documentation and escalation workflows. I hold CompTIA Security+, the Google Cybersecurity Professional Certificate, and Cisco's Networking Fundamentals Specialization. In my current role, I handle incident tickets end-to-end in a structured, process-driven environment — triaging reported issues, investigating root cause, and documenting remediation through to resolution. I am methodical, detail-oriented, and genuinely motivated to build a long-term career in security operations.

KEY SKILLS

- Incident Triage & Investigation: assessing, prioritising and escalating issues by severity and impact
- Simulated SOC Investigation: phishing, malware and brute-force activity (Let's Defend SOC Learning Path)
- Log Analysis & IOC Identification, following structured triage and escalation workflows
- Incident Documentation: root-cause investigation and remediation records through to resolution
- Security Fundamentals: CompTIA Security+, SIEM concepts, common attack types
- Networking Foundations: TCP/IP, DNS, firewalls (Cisco Networking Fundamentals)
- Stakeholder & Vendor Communication: clear, structured reporting under time pressure
- Programming & Scripting: Python, Java, SQL
- Analytical & Structured Problem-Solving

PROFESSIONAL EXPERIENCE

Systems Transformation & SAP Operations Analyst

Sep 2025 – Present

Pharmanovia | Basildon, England, UK

- Handle incident tickets end-to-end: triaging reported issues, investigating root cause, and documenting remediation actions through to resolution within a structured, process-driven environment.
- Conduct risk assessments for system changes, identifying potential impact and recommending remediation strategies before implementation.
- Liaise directly with third-party vendors to reach agreement on incident, problem and change resolution, engaging stakeholders to remediate identified issues.
- Maintain and improve governance documentation, including process guidelines and standards aligned to ITIL v4, GAMP 5 Annex 11 and Computer Systems Validation (CSV) requirements.
- Produce clear reporting on incidents, risks and changes for stakeholders at different levels across the business.

Digital Transformation Graduate

Sep 2023 – Sep 2025

Pharmanovia | Basildon, England, UK

- Assessed business problems and identified corresponding digital and process solutions, acting as a subject matter expert on emerging technology.
- Produced project scope documents including business justification, cost analysis and risk considerations, presenting recommendations to stakeholders.
- Managed digital projects end-to-end, from inception through go-live, coordinating cross-functional teams and subject-matter experts.
- Maintained accurate, up-to-date project tracking documentation for key stakeholders.

Technology Internship Experience

Jun 2020 – Jul 2020

Bright Network | Remote

- Completed a virtual technology internship exploring industry-standard working practices, testing strategies and risk identification and management across multiple sectors, including an independent project on facial recognition use in banking applications.

CERTIFICATIONS

- Let's Defend – SOC Analyst Learning Path (Jan 2026) — simulated investigations into phishing, malware and brute-force attacks; log analysis, IOC identification, structured triage and escalation workflows

- CompTIA Security+ (May 2025) — security governance, risk management, IAM, security controls, vulnerability management, incident response
- Google Cybersecurity Professional Certificate (Jul 2026) — risk management, Linux, SQL, Python, SIEM fundamentals, security monitoring
- Cisco Networking Fundamentals Specialization (Aug 2026) — TCP/IP, DNS, firewalls
- Additional: SIEM 101; Incident Handler – 2 (Work Ready Virtual Experience); CybSafe Certification in Security Awareness (CCSA)

EDUCATION

BSc Computer Science (First Class Honours)

2019 – 2022

Brunel University London

- Dissertation: independently designed, built and evaluated a full-stack mobile application (React Native, AWS) supporting awareness and reporting of crime and abuse on campus; self-taught unfamiliar frameworks, followed the full SDLC including testing and user evaluation.
- Group Project (Zero Hunger): collaborated in a 4-person Agile team with rotating Scrum Master to build a full-stack web application; developed backend functionality with Java Spring Boot and SQL alongside a React front end.

BTEC Level 3 Extended Diploma, IT — D*D*D*

2017 – 2019

West Thames College

- Relevant coursework: Networking & Infrastructure, Databases, Systems Analysis & Design, Programming/Software Development, Cyber Security Fundamentals.

HONOURS & INTERESTS

- Jack Petchey Award
- Cyber Security: following industry news and threat trends, and hands-on learning platforms to stay current outside of formal study.
- Languages: English (native/bilingual), Malayalam (native/bilingual), Spanish (elementary).
